

MATTHEW JOHNSON

Software Engineer | Applied AI + Full-Stack

Holladay, Utah | 385-243-4677 | matthewisaacjohnson@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Software Engineer with 3+ years building production web applications and a 4.0 GPA B.S. in Computer Science. Hands-on applied AI experience building and shipping LLM-powered applications: retrieval-augmented generation (RAG) with OpenAI APIs and pgvector, agent-based workflows with the OpenAI Agents SDK, and MCP tool integrations in Python. Full-stack foundation in TypeScript/JavaScript, React, and Node.js/Express with CI/CD, Docker, and automated testing — delivering reliable software in regulated, fast-paced environments.

TECHNICAL SKILLS

AI/LLM: OpenAI APIs (Chat Completions, embeddings), RAG and vector search (pgvector), OpenAI Agents SDK, Model Context Protocol (MCP), prompt engineering and eval

Languages: TypeScript, JavaScript, Python, SQL, HTML/CSS

Frontend: React, Next.js, Redux, Tailwind CSS

Backend: Node.js, Express, REST APIs, Python (FastAPI concepts, Flask concepts)

Databases: PostgreSQL, Supabase, vector embeddings, SQL query patterns

DevOps/Cloud: AWS, Azure, Docker, Terraform, GitHub Actions CI/CD, Linux

Testing: Playwright, Appium, Jest, Vitest, unit/integration/E2E testing

Tools/Process: Git, Agile/Scrum, Jira, documentation and runbook authoring, code review

PROFESSIONAL EXPERIENCE

Independent AI Engineer | Applied AI + LLM Applications

2025 - Present

- Built and deployed a production RAG assistant with OpenAI APIs — embeddings, chat completions, and retrievable context stored as vectors in PostgreSQL (pgvector) — including prompt tuning and answer-quality evaluation.
- Developed agent-based workflows with the OpenAI Agents SDK and custom Model Context Protocol (MCP) tools in Python, enabling models to call tools reliably.
- Shipped full-stack AI applications in Next.js/TypeScript with a PostgreSQL/Supabase backend, deployed to cloud hosting.
- Continually evaluating techniques: retrieval quality, prompt design, cost/accuracy tradeoffs, and integration patterns for LLM products.

Software Engineer | Sorenson Communications

Utah | Jul 2022 - Jul 2025

- Built and maintained software features across the full stack using TypeScript, JavaScript, and React, with Node.js-backed services in a regulated, high-compliance environment.
- Owned quality across the codebase with automated testing (Jest, Vitest, Playwright, Appium), reducing regressions and raising confidence in releases.
- Streamlined delivery by setting up CI/CD with GitHub Actions and Docker, improving deployment reliability and developer workflow.
- Wrote thorough documentation and runbooks that lowered onboarding time and reduced recurring support questions.
- Collaborated with cross-functional teams and stakeholders, clearly communicating technical decisions and status.

Computer Science Tutor | Weber State University, Ogden, UT

Jul 2020 - 2022

- Taught students core computer science concepts (data structures, algorithms, web development), adapting explanations to individual learning styles.

Front Desk Supervisor | South Davis Recreation Center, Bountiful, UT

May 2015 - 2021

- Managed daily operations and a team of three; handled 100+ transactions per day with accurate cash records and trained 20+ staff on procedures.

EDUCATION

B.S. Computer Science, GPA 4.0 | Weber State University, Ogden, Utah

May 2022

Continuing education: applied AI, LLM engineering, and modern full-stack development (Scrimba, 2025-present).
